

Every Star is a Sun

The Solar System is our “home” in space, a collection of planets orbiting a star, our sun.

- Find your way through the Solar System maze to the centre and draw the sun.
- Colour in the planets.
- Add some celestial features: stars, comets, planets, moons, meteors, asteroids.
- What else might you see in space? You could add rockets, space telescopes, satellites, astronauts, spaceships, space junk, aliens...

Artist Nancy Holt used light in her art to ‘bring the sky down to earth’, making connections between everyday life and the vastness of space. In “Electrical system”, an artwork made of 75 lightbulbs and metal ducting, she reveals the lighting system of a building but it is also your very own indoor galaxy!
